Fig. 1 displays various water sources U.S. refineries use. The purchased water (municipal water), surface water, and ground water are treated at pretreatment plants prior to use with the refinery units, while the rain water and water separated from crude oil will be directed to waste water treatment plants (WWTPs).

Disease burden is the impact of a health problem as measured by financial cost, mortality, morbidity, or other indicators. It is often quantified in terms of quality-adjusted life years (QALYs) or disability-adjusted life years (DALYs), both of which quantify the number of years lost due to disease (YLDs). One DALY can be thought of as one year of healthy life lost, and the overall disease ...

Agriculture, and especially irrigated agriculture, is the sector with by far the largest consumptive water use and water withdrawal. To estimate the pressure of irrigation on the available water resources, an assessment has to be made both of irrigation water requirement and of irrigation water withdrawal.
