

flow simulation on supercomputers pdf

Computational fluid dynamics (CFD) is a branch of fluid mechanics that uses numerical analysis and data structures to analyze and solve problems that involve fluid flows. Computers are used to perform the calculations required to simulate the free-stream flow of the fluid, and the interaction of the fluid (liquids and gases) with surfaces defined by boundary conditions.

In this comment we address the preprint of Jha and Hirata (arXiv:1809.10316 [physics.chem-ph]) which claims "Numerical Evidence Falsifying Finite-Temperature Many-Body Perturbation Theory." We agree that finite difference differentiation of the exact grand potential is the correct way to verify the terms in the perturbation expansion.

Numerical weather prediction (NWP) uses mathematical models of the atmosphere and oceans to predict the weather based on current weather conditions. Though first attempted in the 1920s, it was not until the advent of computer simulation in the 1950s that numerical weather predictions produced realistic results. A number of global and regional forecast models are run in different countries ...

Numerical weather prediction - Wikipedia

A cycling peloton is the main group of cyclists riding closely together to reduce aerodynamic drag and energy expenditure. Previous studies on small groups of in-line drafting cyclists showed reductions down to 70 to 50% the drag of an isolated rider at same speed and these values have also been used for pelotons.

Aerodynamic drag in cycling pelotons: New insights by CFD

Discussing what separates the finite-element, finite-difference, and finite-volume methods from each other in terms of simulation and analysis.

The use of computer models runs right through the heart of climate science. From helping scientists unravel cycles of ice ages hundreds of thousands of years ago to making projections for this century or the next, models are an essential tool for understanding the Earth[™]s climate.

UMass Amherst geoscience researchers say a column of lighter material appears to have squeezed up under the Adirondacks, possibly expanded by heat, to form the dome-shaped mountain range.

Geoscientists offer new evidence for how the Adirondack

Break through any supercomputing challenge. Solving the largest data analysis problems demands powerful supercomputing solutions. Only HPE has the combination of proven expertise and skills, comprehensive portfolio, partner ecosystem, and deep commitment to innovation to be your strategic supercomputing partner.

I know you're not serious, but! This reminds me of something Kenzi said this weekend in California, which is that her least favorite kind of CFAR applicant is the one who says "I have come up with the optimal plan for how to improve my life and the world, but instead of doing it I just sit around and play video games."
