The present manuscript was written for my course Functional Analysis given at the University of Vienna in winter 2004 and 2009. It was adapted and extended for a course Real Analysis given in summer 2011. The last part are the notes for my course Nonlinear Functional Analysis held at the University of Vienna in Summer 1998 and 2001.

As is usual practise in functional analysis, we shall frequently blur the distinction between  $f$  and  $[f]$ . (Discussion of  $L_p(\mathbb{R})$  may be found in [17, Chapter 28] and [26, Chapter 7]; the generalisation from  $\mathbb{R}$  to a subinterval is trivial.) Example 1.12.

We recall that a functional is a function defined on  $E$ , or on some subspace of  $E$ , with values in  $\mathbb{R}$ . The main result of this section concerns the extension of a linear functional defined on a linear subspace of  $E$  by a linear functional defined on all of  $E$ . Theorem 1.1 (Helly, Hahn-Banach analytic form). Let  $p: E \rightarrow \mathbb{R}$  be a function satisfying

functional analysis centers around the interplay of different topologies. We are aiming at the following 2-1. 2-2 2. GEOMETRIC HAHN-BANACH THEOREMS Theorem 2.1. Let  $K$  be a non-empty convex subset of  $X$ , a linear space over  $\mathbb{R}$ , and suppose  $K$  has at least one interior point. If  $y \in K$  then  $\exists$  a linear functional  $\phi \in X^*$  s.t.

Functional analysis plays an important role in the applied sciences as well as in mathematics itself. These notes are intended to familiarize the student with the basic concepts, principles and methods of functional analysis and its applications, and they are intended for senior undergraduate or beginning graduate students.

mission statement, the Functional Analysis allows identifying the physical components, the so-called building blocks, which constitute the future product, and how they are interrelated to build up the functional architecture of the future product. Moreover through Functional Analysis the functional requirements can be defined or anyway refined.

via functional regression based and functional discriminant analysis. These topics will be explored in Section 4. The classical methods for functional data analysis have been pre-dominantly linear, such as functional principal components or the functional linear model.
