

### **power boiler design inspection pdf**

Boiler design is the process of designing boilers used for various purposes. The main function of a boiler is to heat water to generate steam. Steam produced in a boiler can be used for a variety of purposes including space heating, sterilisation, drying, humidification and power generation. The temperature or condition of steam required for these applications is different, so boiler designs ...

### **Boiler design - Wikipedia**

A boiler or steam generator is a device used to create steam by applying heat energy to water. Although the definitions are somewhat flexible, it can be said that older steam generators were commonly termed boilers and worked at low to medium pressure (7â€“2,000 kPa or 1â€“290 psi) but, at pressures above this, it is more usual to speak of a steam generator.
